# Turf Drain®

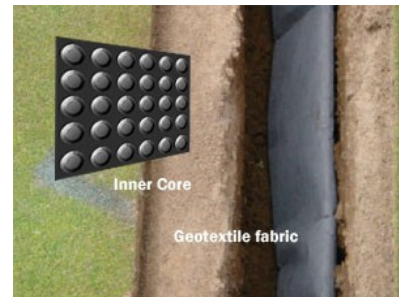

## The Original Waffle Drain

**Turf Drain® is the flagship product of Turf Drainage Company of America.** Turf Drain was the first “waffle drain” introduced to the golf course industry at the 1985 GCSAA conference in San Francisco.

Turf Drain can be used anywhere you would use perforated pipe and installs in a 3” trench.

It consists of two components; an outer geotextile fabric wrapped around a 7”x1” inner core. The unique core design provides a greater collection area for water to enter the flow area than is possible with perforated pipe—roughly equal in permeability to a gravel trench five feet wide! Water enters evenly along the vertical sidewalls and doesn’t concentrate flow like perforated pipe.

Turf Drain has been used on the finest courses in America in all applications, including greens, fairways, and bunkers.

**The 7”x1” inner core wrapped with a geotextile fabric and installed in a 3” trench is roughly equal in permeability to a gravel trench 5’ wide!**
