

TM

# PERMA BASIN

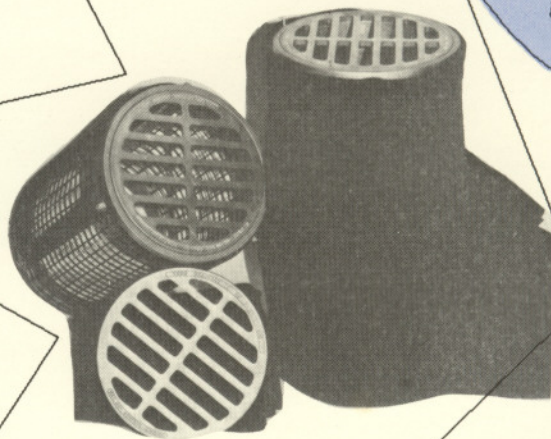

*The basin  
built to leak.*

*Permeable sidewalls.*

*Perma Basin not only  
collects surface water,  
but the water that gets  
trapped into the profile  
surrounding the basin.*

*Large openings between the  
grate bars helps to reduce  
the tendency to "trash over".*

*Wire wall screens trash  
vertically. The deeper you  
build the basin, the more  
area there is for storage of  
trash under outfall pipe.*

*No special  
connectors or  
fittings needed for  
different size  
pipes. Universal  
sleeve connector  
simply wraps  
around the pipe to  
be connected*

*No need to  
knock out  
holes in the  
walls to  
connect outfall  
pipes. Simply  
slide pipe up  
and down to  
the grade  
desired, and  
backfill.*

*All aluminum construction means years of service.  
Won't deteriorate from sunlight like plastic grates.*
